

# PRODUCT INSTRUCTIONS

## PRODUCT SKU-8035 WALKWAY

### STEP 1

Ensure that the surface the walkway is being applied to is free from any dust, dirt or grease and is **dry**.

If the surface is porous, such as wood, concrete or stone, we recommend sealing the surface prior to application.

### STEP 2

With the help of another person, remove the backing from one edge and start applying to the surface, peeling the backing off as you go.

**STEP 3**

Use a Seam Roller to ensure that there are no air pockets and the edges are applied firmly to the surface

**STEP 4**

Apply our EdgeFix sealant down the edge of your floor marking product using the narrow nozzle built into the tube. Once applied, Edge Fix will ensure that your product's edges are secured to the surface, extending the life and durability of your floor marking product.
